What does a SCALABLE GROW FACILITY LOOK LIKE?

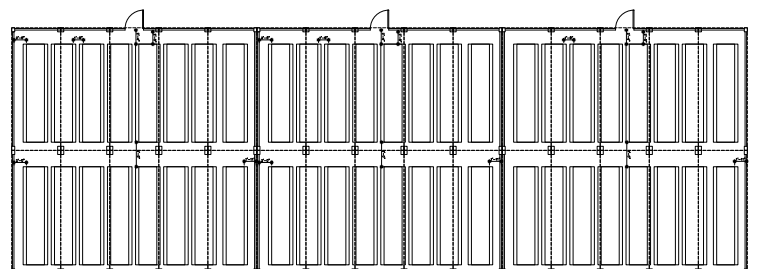

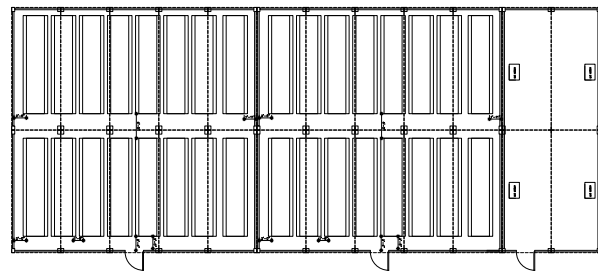

Box4Grow modular grow rooms are made up of prefabricated shells that can easily be connected to form larger grow spaces.

Once connected the rooms can easily and seamlessly become a full grow facility. All the configurations are uninterrupted by columns and allow unhindered growing access.

EXAMPLE:

The single footprint grow room has a 20' x 8' frame. It can be connected to make a 40' x 8' room or a 40' x 16' room.

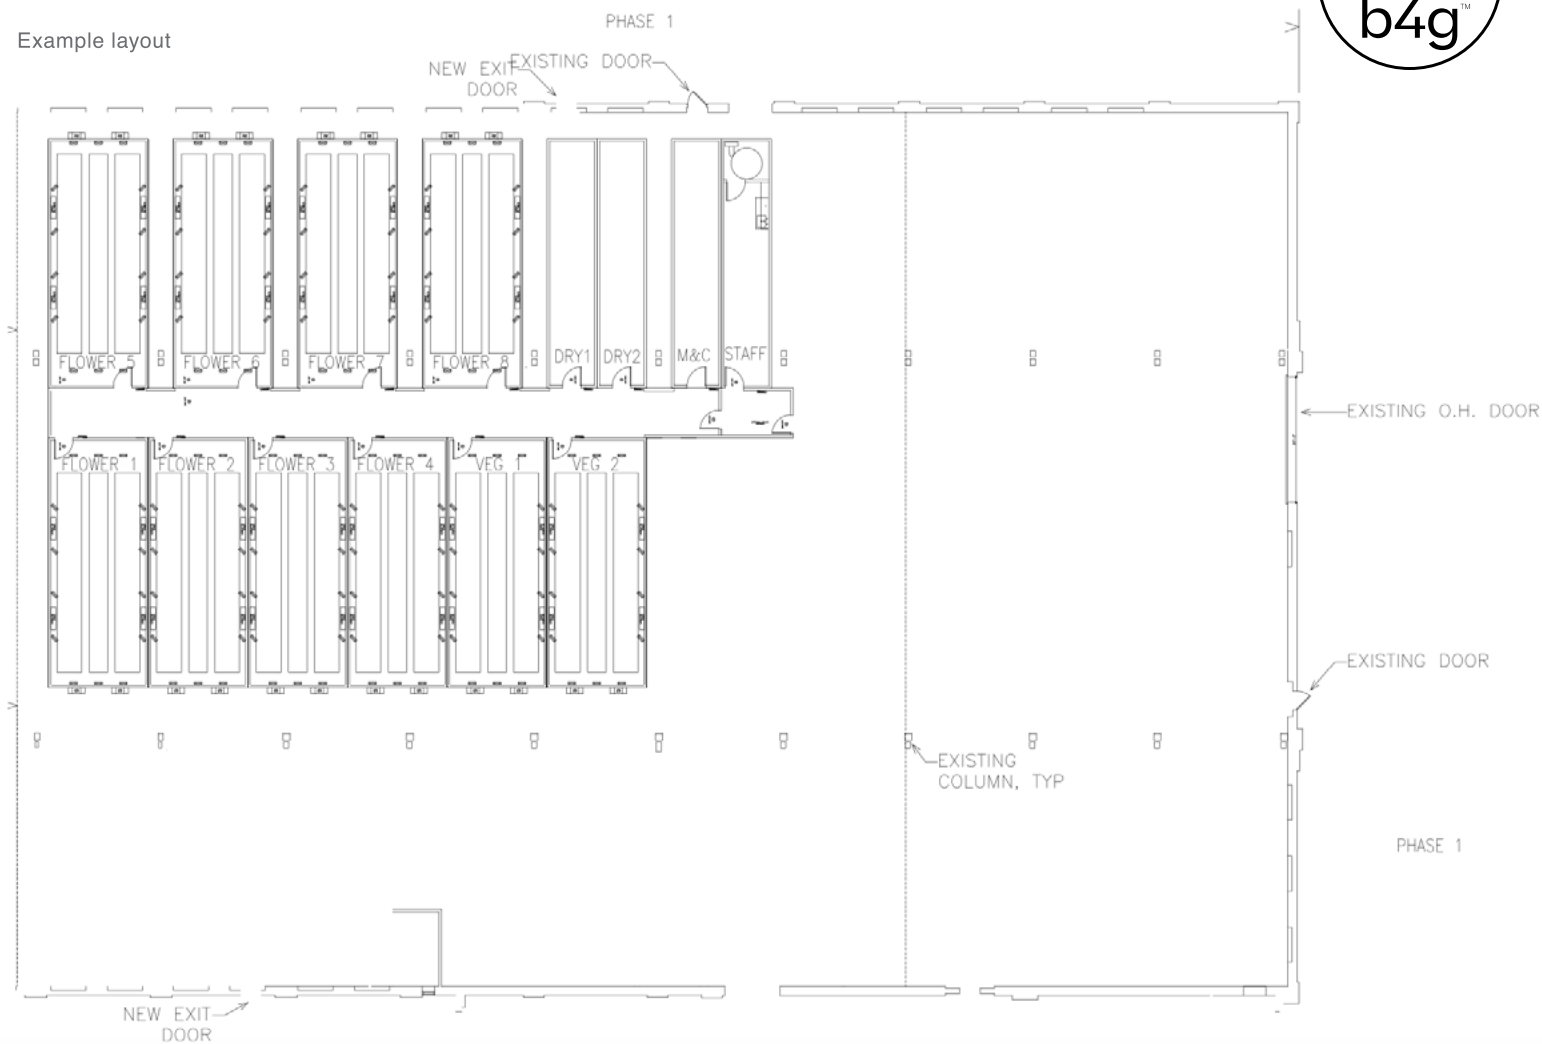

Each shell can be connected for multiple configurations for veg, flower, dry rooms and extraction rooms, vaults, staff rooms, and utility rooms — all within the modular framework. They are linked by modular hallways so the entire facility becomes a closed environment.
